

When you have trouble breathing from severe COPD/emphysema, even the little things can be hard to do.

**The Zephyr<sup>®</sup> Valve may help you get back to life on your terms.**

# Breathe Easier, With the Zephyr Valve

## Do you:

- **Have a confirmed diagnosis** of COPD or emphysema?
- **Feel breathless**, even while taking your medication as directed?
- **Struggle** with daily tasks?

**If you answered yes to any of these questions, Zephyr Valves may be right for you.** The Zephyr Valve is a minimally invasive treatment — not another medication or surgery. It can help increase lung function, giving you more energy and confidence to live a fuller life.<sup>1</sup>

**Breathe Easier**

**Enjoy Life More**

**Have More Freedom**

**Feel More Confident**

valve

**Important Safety Information:** The Pulmonx Zephyr<sup>®</sup> Endobronchial Valves are implantable bronchial valves indicated for the bronchoscopic treatment of adult patients with hyperinflation associated with severe emphysema in regions of the lung that have little to no collateral ventilation. Complications of treatment can include but are not limited to pneumothorax (tear in the lung), worsening of COPD symptoms, hemoptysis, pneumonia, and, in rare cases, death. The Zephyr Valve is contraindicated in patients who have not quit smoking or are allergic to Nitinol (nickel-titanium). Please talk with your physician about other contraindications, warnings, precautions, and adverse events. Only a trained physician can decide whether a particular patient is an appropriate candidate for treatment with the Zephyr Valve.
