Zephyr[®] Valves for severe COPD/Emphysema.
Are They Right For You?

For every breath and a wide range of eligible people, there's Zephyr® Valves

zephyr®
by pulmonx

Do you:

- **Have a confirmed diagnosis** of COPD or emphysema?
- **Feel breathless**, even while taking your medication as directed?
- Have **reduced lung function**?

If you answered yes to these questions, Zephyr Valves may be right for you.

The Zephyr Valve is a minimally invasive treatment – not another medication or surgery. It may help you breathe easier, be more active and enjoy a better quality of life.¹

See if Zephyr Valves may be right for you.

To learn more about the procedure and if you may be eligible, use the camera on your smartphone or tablet to **scan the code**.

You can also visit zephyrvalves.com or Call the Zephyr Valve Care Team at **(844) 714-4222**

Important Safety Information: The Pulmonx Zephyr® Endobronchial Valves are implantable bronchial valves indicated for the bronchoscopic treatment of adult patients with hyperinflation associated with severe emphysema in regions of the lung that have little to no collateral ventilation. Complications of treatment can include but are not limited to pneumothorax (tear in the lung), worsening of COPD symptoms, hemoptysis, pneumonia, and, in rare cases, death. The Zephyr Valve is contraindicated in patients who have not quit smoking or are allergic to Nitinol (nickel-titanium). Please talk with your physician about other contraindications, warnings, precautions, and adverse events. Only a trained physician can decide whether a particular patient is an appropriate candidate for treatment with the Zephyr Valve.
